

**AMERICAN
QUALITY**

DESIGNED, ENGINEERED &
ASSEMBLED IN THE USA

**HEATING AND
AIR CONDITIONING**

Experience. Pride. Dedication.

From our hometown to yours.

Your trust in Coleman® heating and cooling is a matter of personal pride. We are well-trained, highly dedicated individuals who truly care about the lasting dependability of every Coleman® heating and cooling unit that comes off the line. That's why we build each one as if it were for our own home.

Skill and expertise - these are the essential components of craftsmanship. Combined with passion and commitment, these characteristics form an unparalleled collective of workers, focused on delivering the very best. While utilizing the latest equipment and technology in our state-of-the-art facilities, they never settle for "good enough." We perform run tests on all our outdoor and indoor products, meaning each unit is powered up and run to make sure it's operating correctly before it leaves the factory. We perform on average about 125,000 hours of run testing annually in our facility because we believe in taking the extra steps and doing things right - because we know you're depending on us.

Performance. Efficiency. Reliability.

Delivering quality -
close to home.

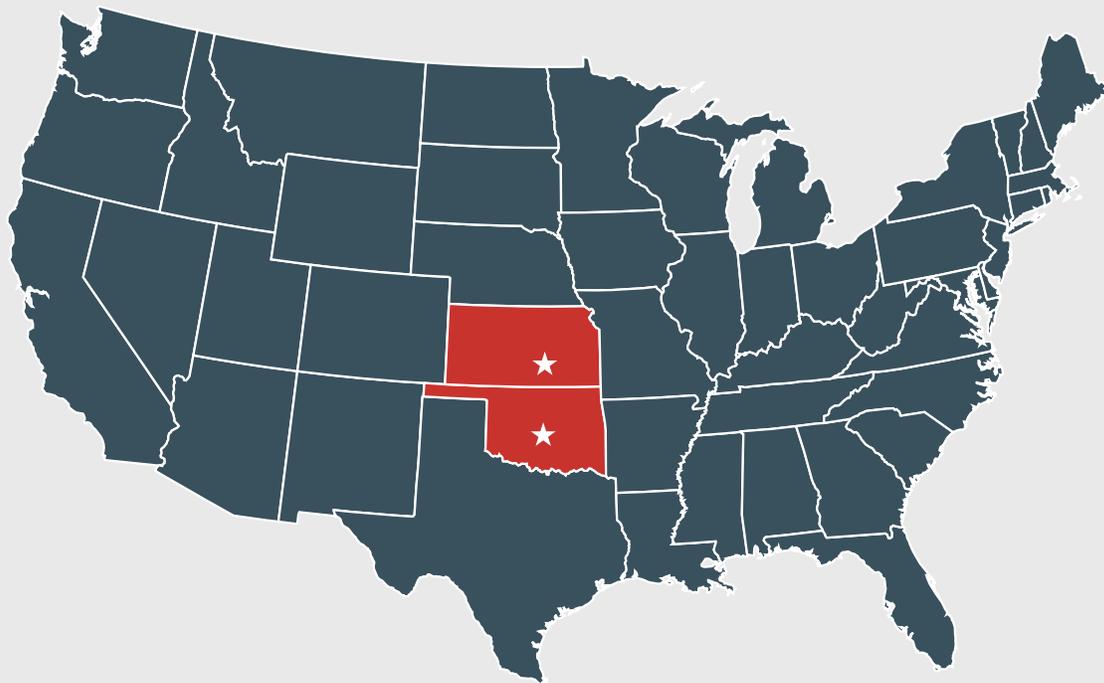

Exceeding customer expectations requires continual advances and attention to detail. So when it comes to operations and facilities, we believe there's no place like home - to build something for yours. Designing, engineering, and assembling your Coleman® heating and cooling unit in the United States ensures we can closely monitor and improve processes that directly affect quality.

Compare a Coleman® system to any other brand and you'll see that we're an industry leader with best-in-class features and efficiency. But, a product spec sheet doesn't tell the entire story. The performance and reliability of your unit are the result of strict tolerances and rigorous testing that continue throughout the entire process. Our lab testing facilities boast thousands of hours annually of accelerated lifecycle, transit, and weather testing to ensure the highest quality you expect through the life of your HVAC units. It takes more than just metal and circuitry to make a Coleman® heating and cooling unit. It takes people of integrity from right here in the heart of America.

Coleman® HVAC. American reliability you can trust.

Creating jobs for generations

Our Kansas and Oklahoma facilities employ more than **2,400 people**

Over 120 of our people have been employed with us in excess of **30 years**
